BASIC-ABSTRACT:

Duct comprises non-combustible soft sheet prepd. by
laminating fibrous sheet(s)
with elastomer. The sheet has rigidity up to 2000 mg (JIS
L-1079).

The fibrous sheet is woven, nonwoven or knitted textiles of
aramid fibre (e.g.
p-phenylene terephthalamide), phenolic resin fibre, F-contg.
resin fibre (e.g.
Teflon), carbon fibre, such fibre treated with

flame-retardant, glass fibre,
metallic fibre (e.g. stainless steel or Al), alumina fibre,
boron fibre,
silicon carbide fibre or asbestos fibre.

The elastomer is pref. silicone resin, halogen-contg. vinyl
resin, polyimide
resin or halogen-contg. rubber blended opt. with
flame-retardant. It is coated
on fibrous sheet by dipping, coating, spraying or laminating.

When higher heat
insulation is required, the sheet may be laminated with heat
insulating layer
(e.g. glass wool, polyurethane foam or layer contg. inorganic
hollow spheres,
bubbles of CO₂ or freon gas). The sheet is formed into a
duct using adhesive,
high frequency welding, ultrasonic welding or seaming.

ADVANTAGE - The sheet has light wt., high flexibility and
forming workability.
